*Specialist shoes for  
people with diabetes or  
rheumatism*

# *Your feet play a supporting role in your life: give them the protection and attention they deserve.*

Movement is a basic need and is an elementary prerequisite for our health. It increases well-being, prevents diseases and enables us to actively enjoy life. Our feet therefore play a major supporting role for our entire musculoskeletal system.

We usually only notice how important our feet are for our mobility, and thus our well-being, when problems arise – such as pressure sores or minor wounds, which can become a serious health risk for people with diabetes in particular. Rheumatic inflammatory diseases in the foot or toe area are often associated with calluses, misalignments and even toe deformities. These symptoms also require special attention.

With LucRo products, we want to give feet the protection and treatment they deserve. Now with four different shoe collections and a total of 204 items, we offer people with diabetes or rheumatism a variety of options to find their perfect shoe – for their individual foot shape, for their individual symptoms and for their individual taste.

On the street, out in nature or at home, LucRo specialist shoes give you a key piece of your quality of life back: the joy of movement with every step.

**Only the best for your feet. LucRo.**

# *Foot complaints* **COMMONPLACE WITH DIABETES OR RHEUMATISM**

## **Millions of people are affected**

Foot complaints are not generally given much attention. With diseases such as diabetes or rheumatism, however, they are anything but rare – millions of people in Germany are affected by diabetic or rheumatic foot complaints. These range from mild calluses through toe deformities up to the dreaded diabetic foot syndrome.

**MORE THAN SIX  
MILLION PEOPLE**

live with a diabetes diagnosis  
in Germany.<sup>1</sup>

**1.5 MILLION  
PEOPLE**

in Germany suffer from  
inflammatory rheumatic illnesses.<sup>2</sup>

**WOMEN ARE  
THREE TIMES  
MORE**

affected than men.<sup>2</sup>

**APPROX. 250,000 PEOPLE SUFFERING FROM DIABETES**

already have open wounds on their feet.<sup>1</sup>

**APPROX. ONE MILLION PEOPLE**

with diabetes are at an increased risk of open foot wounds.<sup>1</sup>

**EVERY FOURTH PERSON WITH DIABETES**

will suffer from diabetic foot syndrome in their life.<sup>1</sup>

**AN ESTIMATED EIGHT TO TEN MILLION PEOPLE**

in Germany suffer from hallux valgus (painful deformity of the big toe).<sup>4</sup>

**90% OF PEOPLE**

with inflammatory rheumatic illnesses will suffer from foot and ankle problems in the course of the disease.<sup>3</sup>

# *Diabetes diagnosis* **WALK THROUGH LIFE WITH VIGILANCE**

## **Feet need special attention**

In people with diabetes, pressure sores or blisters caused by shoes that are too narrow or ill-fitting can quickly become a serious health risk. Especially when wounds are noticed much too late or not at all.

Untreated diabetes makes feet more vulnerable. On the one hand, this is due to the impaired metabolism, which makes the skin on the feet more prone to minor cracks and lesions. On the other hand, diabetes is associated with nervous irritation and damage in the long-term, which reduces the sensitivity of the nerves. Injuries are less easy to perceive, if at all. Regular, careful foot checks are therefore essential.

Protective footwear can help to prevent pressure sores in the first place, counteracting inflammatory complications and even amputations at an early stage.

**DIABETES**

*Avoid new wounds*

*Prevent pressure on  
the foot*

*Detect foot lesions  
at an early stage*

**THE RIGHT FOOTWEAR  
CAN HELP**

*Avoid infections and  
amputations*

*Keep moving*

# *The diabetic foot* **KNOW, IDENTIFY AND PREVENT RISKS**

## **What exactly is diabetic foot syndrome?**

Diabetic foot syndrome is one of the most feared secondary diseases of diabetes. Either there is nerve damage in the foot, leading to painless pressure ulcers, or damage to the blood vessels in the foot, causing circulatory disorders. Many cases are present with both forms.

The risk of disease increases with age. Every fourth person with diabetes will suffer from diabetic foot syndrome in the course of their life.

## **How do inflamed foot wounds occur?**

Long-term increased blood sugar levels can damage nerves and blood vessels. The potential consequences are circulatory and sensory disorders.

The triggers for foot infections are usually minor foot injuries or pressure sores, which are not noticed at first due to nerve damage. Pathogens enter the wound and a minor injury becomes a large, inflamed wound. Wound healing is also impaired due to the blood circulation disorder in diabetic feet. Persistent or recurring wounds may be the result. Treatment becomes increasingly difficult. Amputations are required in the worst cases.

## WHAT CAN I DO AS A PATIENT TO PREVENT THESE DREADED CONSEQUENCES?

Prevention is the best protection. People with diabetes can make a decisive contribution to noticing and treating changes to their feet as early as possible:

→ **Daily foot checks:**

Everyone with diabetes should check their feet for changes, preferably daily, so as not to miss any injuries or pressure sores. Family members can of course also help out.

→ **Medical foot clinic:**

In addition to visual checks, regular visits to a medical foot clinic are strongly recommended. The more nerve damage (polyneuropathy) there is, or the more pronounced the symptoms of diabetic foot syndrome are, the more often you should be seen.

→ **Wear the right shoes:**

Well-fitting and, in particular, non-restrictive shoes are more than important as a preventative measure. Orthopaedic shoes for people with diabetes protect the feet with their special features (see also pages 30–33). Clinical studies confirm that the risk of recurring foot ulcers can be reduced by 80% by wearing 'diabetes-appropriate footwear'. It is also advisable to wear suitable footwear with socks at home and not to walk barefoot where possible.

# Effective foot protection

## THE CLINICAL EVIDENCE

### The LucRo classic study

The results of our clinical study carried out at Heinrich Heine University in Düsseldorf, Germany, show that suitable diabetic footwear can make a significant contribution in preventing foot ulcers and/or recurring inflammations (recurrences). It monitored 92 high-risk diabetic patients with healed foot ulcers for recurrence of foot ulcers over a period of 42 months. Some of the patients wore normal footwear, the others wore the LucRo classic specialist diabetes shoe.

### Latest study results on the LucRo ergonomic

A recent study conducted by Dr Dirk Theodor Schraeder, Klinik für Technische Orthopädie, Physikalische Medizin und Rehabilitation (clinic for technical orthopaedics, physical medicine and rehabilitation), at the Hospital zum Heiligen Geist in Geseke, Germany, confirms that the LucRo ergonomic also meets the requirements for a ready-made protective shoe for people with diabetes and is thus a therapeutic tool.

→ Diabetes

# *Rheumatism diagnosis* **DON'T LET IT STOP YOU**

## **Break free of the vicious circle**

Movement improves quality of life and well-being. But if you suffer from rheumatism, you quite often feel the exact opposite: pulling, tearing pain with every movement. Deformations and stiffness in the joints can also aggravate the situation.

Reason enough for many affected persons to reduce their physical activity to the minimum. Yet it's precisely this that increases painful symptoms. It's a vicious circle you must break – with pain relief and the promotion of pain-free movement.

Choosing the right footwear can help a great deal.

**RHEUMATISM**

*Relieve ankles*

*Reduce pain when  
moving*

**THE RIGHT FOOTWEAR  
CAN HELP**

*Bring back the joy  
of movement*

*Provide optimal care for  
foot deformities*

# The rheumatic foot

## REDUCE PAIN, RELIEVE ANKLES

### What is rheumatism exactly?

Rheumatism is a collective concept that includes around 100 different diseases caused by inflammation. The medically correct term is 'rheumatic diseases'. The term 'rheumatism' is Greek in origin and means 'pulling, tearing pain'. This is also precisely what the different forms of the disease have in common: pain and restricted movements.

The most common rheumatic disease is wear-related, degenerative joint disease – primarily arthrosis. There are also the inflammatory joint diseases. Rheumatoid arthritis occurs most frequently. With this disease, the body's defences are misdirected: the immune system fights its own joints and various tissues. Women are affected two or three times more often than men.

### What happens when the feet are affected?

With a rheumatoid disease, the feet and/or the hips and toe joints can also be affected. The most common symptoms of rheumatoid arthritis in the foot are pain, swelling and stiffness, which usually occur bilaterally, i.e. on both ankles. This can impair the gait and foster the development of corns, calluses and toe deformations. Hallux valgus (big toe bunion), hammer toes and claw toes are among the most common defects.

## WHAT CAN I DO AS AN AFFECTED PERSON TO REDUCE PAIN AND RELIEVE THE JOINTS?

Rheumatism has no cure, but there is still a lot we can do to enable people with rheumatism to lead a life as free from symptoms as possible. In addition to medical treatment and surgical interventions, the patients themselves can also help to reduce pain and promote quality of movement.

→ **The right diet:**

A healthy diet agreed with your doctor is an important addition to rheumatoid medications and can help to relieve discomfort. It can also help against obesity, which puts additional strain on joints.

→ **Joint-friendly sports:**

Physical activity has a beneficial effect on the joints of people with rheumatism. It strengthens the muscles, stabilises the gait and soothes pain. Joint-friendly endurance sports such as swimming, cycling, t'ai chi or water aerobics can help.

→ **The right footwear:**

Shoes also have a key part to play in the treatment of rheumatism. Extra-soft materials are used to make orthopaedic specialist shoes, like the LucRo shoe, for people with rheumatism. In combination with their expansive volume, they give toes sufficient freedom of movement. Shock-absorbing soles, support inserts and flattened heels ensure optimal pressure relief and contribute to an improved gait.

A woman with curly hair, wearing a white lab coat over a grey sweater, is sitting and talking to an older woman with short blonde hair wearing a blue shirt. They are in a clinical setting with a whiteboard in the background. The top of the page has a grey curved shape with a dashed white line.

## *The foot experts* **FOR PEOPLE WITH DIABETES OR RHEUMATISM**

### **Finding the right footwear together**

Whether you have diabetic foot syndrome or rheumatic discomfort, you don't have to choose the right footwear alone. There are various experts available to help people with diabetes or rheumatism:

→ **The doctor**

who makes the diagnosis checks the health of your feet and prescribes a suitable specialist orthopaedic shoe in the case of an appropriate indication.

→ **The orthopaedic (shoe) technician**

who uses various measurements and in-depth knowledge to select the right shoes for you as an individual, and can also make further necessary adjustments.

→ **The shoe manufacturer**

who makes and develops specialist orthopaedic shoes in close consultation with physicians and orthopaedic shoe technicians, based on current scientific research.

Digital foot scanning system DigiPED

### THE TIP THERM

checks the foot's temperature sensitivity.

### Pressure measurements

In addition to determining the sensitivity of the foot, measuring the pressure distribution of the foot is part of every shoe fitting. Pressure peaks often promote the emergence of wounds under the foot. This makes an even pressure distribution under the sole all the more important.

A simple observation of the soles when standing is done using a podoscope or a digital scanning system. The electronic measurement optimises the quality of individual care: this makes documenting the outcomes of the treatment course easy and sustainable. When making orthopaedic inlays adapted for diabetes, pressure measurement in the shoe is required by your statutory health insurance company.

### THE TUNING FORK

checks depth perception.

### Determining foot sensitivity

### THE MONOFILAMENT

checks surface perception.

Measuring the pressure distribution of the foot for the perfect shoe fit

A woman with blonde hair, wearing a light blue quilted puffer vest over a grey long-sleeved sweater, is smiling and looking upwards. She is holding two trekking poles, one in each hand, raised above her head. The poles are black with purple accents. The background is a clear, bright blue sky. A large, light blue curved shape with a dashed white border is at the top of the image. An orange curved banner is positioned across the middle of the image, overlapping the trekking poles.

# *LucRo sportic* **ACTIVE EVERY DAY**

## **Movement is the best medicine**

Movement is not only healthy, it is also beneficial. In people with diabetes, it helps to reduce blood sugar levels. People with rheumatism can stop or slow down the progress of joint wear through regular movement.

But just as important: physical activity also promotes emotional well-being, and therefore overall quality of life. Being physically active doesn't have to be in a sports club or gym. It can be a long walk, a group trip into the countryside or a forest hike. The LucRo sportic is perfect for just this.

## LUCRO SPORTIC: FUNCTIONAL AND SPECIALIST SHOE IN ONE

Just like the other three LucRo shoe series classic, kinetic and ergonic, the latest collection also ensures perfect all-round protection that takes the pressure off the foot and reduces the risk of recurrent diabetic foot syndrome.

→ **Anti-slip and weatherproof:**

With its sturdy sole, its weather-resistant material and athletic fit, the new LucRo sportic is the ideal outdoor shoe alternative to your solid everyday shoe. On gravel paths, hiking trails or cross-country – it gives feet a secure hold without pressure.

→ **Innovative 'rebound effect':**

A special material in the midsole – an innovative particle foam, which creates what is known as the rebound effect in the latest running shoe models from well-known sporting-goods manufacturers, is also used in the new LucRo sportic. The special feature of the new sole material: if a high level of pressure is created when stepping, the sole immediately springs back to its original form. At low pressure, the material cushions the foot and absorbs the energy. This means the shoe wearer needs much less energy when walking and the joints are relieved.

*Collection pages 110–141*

# LucRo

## THE BEST FOR EVERY FOOT

### The classic one

**The LucRo classic can protect against recurring ulcers in diabetic foot syndrome with almost 80% certainty.**

This was clinically proven in a 42-month study (see also page 16). But pressure relief and protection against recurring ulcers are certainly not everything the LucRo classic has to offer.

#### Perfect all-round protection plus:

- anatomically shaped, classically formed last
- large and diverse selection of 72 models

*Pages 38–77*

### The slimmer one

**The LucRo kinetic is the slimmer-cut alternative that also provides ulcer-recurrence protection.**

The feature of the LucRo kinetic line is a modified fit. We have given the last form a slimmer and narrower rear foot in the heel. This gives the shoe a different look and ensures an optimised heel guide especially for slimmer heels.

#### Perfect all-round protection plus:

- last in a narrower natural form
- special kineticBags in the soles that relieve the joints
- large and diverse selection of 46 models

*Pages 78–109*

### The sporty one

**New to the range: the specialist shoe for people with diabetes who want more active leisure time.**

The latest LucRo collection also has the protective properties for diabetes-friendly foot care. Thanks to its anti-slip sole and sturdy design, it ensures stability especially over rough terrain.

**Perfect all-round protection plus:**

- last in a narrower natural form
- anti-slip, sturdy TPU outsole
- innovative, joint-protecting midsole
- large and diverse selection of 48 models

Pages 110–141

### The adaptable one

**In addition to proven ulcer-recurrence protection, the LucRo ergonomic also provides ideal features for rheumatism care.**

A recent diabetes study shows that the LucRo ergonomic effectively protects against recurring foot ulcers. Its joint-friendly features also reduce the symptoms of rheumatism patients. This is why the LucRo specialist shoe is listed for both indications.

**Perfect all-round protection plus:**

- last in a natural form
- stiffening sole for optimum pressure distribution (must be firmly glued in for diabetes!)
- large and diverse selection of 38 models

Pages 142–173

# LucRo features

## GOOD DESIGN ON THE OUTSIDE, GOOD PROTECTION ON THE INSIDE

### Trendy designs just like a modern everyday shoe

Classic or athletic fit, narrow foot shape or expansive volume – in addition to optimum all-round protection, all LucRo collections have another thing in common: their appealing design. The therapeutic benefit that comes with each LucRo shoe is packaged in a modern-looking shoe perfect for every day.

### Interchangeable stiffening soles for LucRo ergonomic

Depending on the indication and individual form of your complaints, you can choose from up to three different stiffening soles. Note: In the case of diabetes, the stiffening sole must be glued in firmly!

Three interchangeable  
stiffening soles

### Breathable Sympatex membrane for weather-resistant LucRo boots

The use of a breathable Sympatex membrane in LucRo boots makes them 100% waterproof. This intelligent combination of materials guarantees freedom of movement in all weather conditions. It is made from recyclable, harmless polyether-ester and is therefore absolutely environmentally and skin-friendly.

100%  
waterproof

### Joint-friendly kineticBags in the LucRo kinetic

The kineticBags specially incorporated in the outsole absorb the impact energy and ensure additional joint relief.

### Midsole with 'rebound effect' in the LucRo sportic

A special midsole material made of expanded thermoplastic polyurethane (TPU) ensures comfort and excellent running characteristics. The sole immediately rebounds into its original shape after stepping. Running therefore requires less energy and joints are relieved: the so-called rebound effect.

### Soft, high-quality upper materials

We use sophisticated and high-quality materials from sustainable production (see also pages 34–35). Selected LucRo ergonomic models are also available with stretch leather, which offers people with rheumatism in particular additional comfort.

### Wide opening makes it easy to put them on

No pressure should be applied to the foot, even when putting on the shoes. Thanks to its wide opening, it's easy, comfortable and safe to step into the LucRo shoe.

# *LucRo features* **PERFECTION DOWN TO THE LAST DETAIL**

→ LucRo design features

**Four different widths**

The four widths S, M, W and +10 (10 mm additional shaft height) offer a good selection of care options in each LucRo shoe collection.

Three-part, shock-absorbing insole made from special soft foam

Different firmness in front and rear foot

Stiffened insole with LucRo classic, kinetic and sportic

Stiffening element

Relieving sole with heel and forefoot roll for controlled rolling

LucRo outer sole for even pressure distribution under the foot

Different outer soles depending on LucRo collection

# *Our quality promise* **SUSTAINABLE AT EVERY STEP**

## **The highest standards in material and production**

As a responsible family business, it is a matter of course for us to produce exemplary quality. Our high quality standards don't just apply to our products, but to the entire business. The issue of sustainability also plays a decisive role. This applies to our own manufacturing processes as well as to the choice of our material suppliers. We only work with qualified manufacturers who meet our high standards of high-quality processing and sustainable production.

## **TÜV-certified quality management**

We request an independent, external quality inspection every year. Since 1997, our company's performance has been distinguished by the TÜV Rheinland quality-management certificate. This certifies that our work processes are systematised and the manufacture of high-quality products is ensured.

## **QUALITY YOU CAN TRUST**

- **artisanal**  
Excellent quality for over 130 years
- **sustainable**  
Sustainability is a key quality feature in our own processes and supplier selection
- **medical and scientific**  
Medical efficacy of LucRo classic and ergonomic demonstrated by clinical studies
- **independently tested**  
Independent and external quality inspection as well as quality management certified by TÜV Rheinland

## ENVIRONMENTALLY FRIENDLY

LucRo leather – beautifully worked, sustainably sourced

### Environmentally friendly leather production

Tannins are an important part of preserving animal skins and making them into leather. These days, chemically produced tanning agents are generally used to meet modern needs. The key here is correct implementation, taking account of all environmental protection requirements. This applies to the tanning process as well as to the disposal of chemical substances.

We only use appropriate and sustainably produced leather types so you can always be sure of the highest quality at LucRo.

This symbol tells you which LucRo shoes are made from pure vegetable-tanned leather.

### The alternative: purely vegetable-based tanning

One alternative to chemical tanning is vegetable tanning. This uses only tannins from nature, such as extracts of wood or rhubarb. No artificial or synthetic additives are used. This process is one of the healthiest for humans and the environment. Vegetable-tanned leather also protects skin flora. This process costs the tanner much more effort and time: the entire manufacturing process up to the finished leather can often take up to two years. The residues from vegetable tannins are easy to recycle and are used as agricultural fertilisers.

# Foot protection at home

## COMFORT THAT GOES FURTHER

### LucRo slipper models

You are always moving, especially at home. People with diabetes should not go barefoot here either, and should ensure adequate foot protection. We bring the LucRo comfort you're used to into the home with our various slipper styles.

Easy to step into, lightweight and made with soft materials – you'll want to wear them and feel good all the time.

### LucRo socks for even more protection

Our special LucRo socks have all the features you need for optimum foot protection. Unlike normal socks, they are padded across the entire sole area. As they are hand-knotted, no pressure points occur in the toe area and the elastic-free soft cuff also does not exert any pressure. The material composition is particularly skin-friendly. Silver fibres in the cotton also have an antibacterial effect.

### LucRo Komfort diabetic socks

with all the features for optimum foot protection

## IMPORTANT LUCRO CARE TIPS

Only a fully functional shoe provides optimum protection. With a little care and careful handling, you can retain that special LucRo quality for a long time.

→ **Give your shoes a rest:**

Changing your shoes after a single wear and giving them a rest for 24 hours significantly extends the life of your LucRo shoes.

→ **Change your insoles regularly:**

They can lose their functionality after a time due to high stress.

→ **Use a shoehorn:**

This means you'll protect the extended rear cap and get the optimum heel guide.

→ **Let your shoes dry at room temperature:**

Slow drying (never place them in front of a heater) and regular care with a high-quality shoe polish or nubuck stick protects the leather from drying out.

→ **Protect your shoes before the first wear:**

By spraying the upper material with a protective spray (preferably regularly), the shoes become better protected from moisture.

→ **Regularly brush the leather:**

Regular care with leather brushes and care creams (LucRo care accessories, see page 176) means you will maintain the high quality of the leather.
